LOGISTIC MANAGEMENT

Overview

From order entry and dispatch through real-time decision-making tools, from logistics management through settlements, LogiSys acts as the hub of your operation. The system organizes and integrates all of your company's information to help you operate efficiently and effectively. It is a powerful solution that gives you easy access to numbers-based information, allowing you to operate based on quantifiable facts.

Order Entry

The Order Entry component of LogiSys allows your staff to quickly record all information through a single screen, including pick-up location, multiple delivery locations and scheduled pick-up and delivery times.

Dispatch

It greatly enhances efficiency by allowing users to control all dispatch activities from one central application. Dispatchers can view all available shipments, including individual customer requirements, to determine load priorities and needs.

Invoicing

With LogiSys' invoicing capabilities, you can bill faster and with greater accuracy, resulting in improved cash flow.

Accounting [Coming Soon]

LogiSys deployed with built-in accounting module, offering complete integration with all other accounting features. which means that the information entered into any part of the system is automatic and seamlessly integrates with accounting module.

Management Reporting

LogiSys offers you extensive reporting functionality. We provide a full set of report templates that allow you to create a wide range of management reports specific to your business.
